Biography

Skilled Craftsmanship at the Heart of Smile Solutions

Agne Diliartaite is a Senior Dental Technician at Smile Solutions, contributing her technical expertise to Smile Lab — the practice's in-house dental laboratory. With a Diploma of Dental Technology, Agne has the formal training and hands-on skills required to produce dental restorations to an exacting standard.

The Role of a Senior Dental Technician

Dental technicians are the skilled artisans behind every crown, veneer, bridge, and prosthetic that patients receive. While patients primarily interact with dentists and support staff, much of the precision work that determines the final fit, function, and aesthetics of a restoration is carried out in the laboratory. As a Senior Dental Technician, Agne plays a critical quality assurance and production role in this process — bringing both technical knowledge and refined craft to her work.

At the senior level, dental technicians not only produce restorations to a high standard, but also contribute to quality control, workflow efficiency, and the development of best practices within the laboratory team.

Smile Lab: Where Agne's Work Makes a Difference

Agne is part of the Smile Lab team led by Master Ceramist Greg Karabasis. Smile Lab is embedded within Smile Solutions, meaning the technical team works in close proximity to the clinical team — a distinct advantage over practices that outsource laboratory work.

This integrated model means that Agne and her colleagues can:

- Receive direct feedback from dentists on shade, shape, and fit
- Make real-time adjustments that reduce delays and improve outcomes
- Participate in the innovative workflows that enable Same Day Porcelain Veneers™ (a world-first developed at Smile Solutions)
- Ensure consistently high-quality restorations for Smile Solutions' patients

A Commitment to Excellence

Smile Solutions is Australia's largest single-location private dental practice — an environment that sets high expectations for every member of the team. Agne's senior status within Smile Lab reflects her commitment to those standards and her technical proficiency across the range of restorative work the laboratory produces.

Services Supported by Smile Lab (Including Agne's Work)

The Smile Lab technical team supports a wide range of treatments at Smile Solutions, including:

- Porcelain veneers (including Same Day Porcelain Veneers™) - All-ceramic crowns - Ceramic bridges
- Digital smile design restorations - Implant-supported prosthetics - Inlays and onlays

Frequently Asked Questions

****What does a dental technician do?**** Dental technicians craft the physical restorations — crowns, veneers, bridges, implant components, and more — that dentists then bond or fit in the patient's mouth. They combine materials science, artistry, and precision engineering.

****What is the difference between a dental technician and a dentist?**** Dentists diagnose, plan, and perform clinical procedures directly with patients. Dental technicians work in the laboratory, crafting the restorations that dentists prescribe. Both roles are essential to delivering high-quality dental outcomes.

****What is Smile Lab?**** Smile Lab is the in-house dental laboratory at Smile Solutions, led by Master Ceramist Greg Karabasis. Agne is part of this team, working to produce restorations of the highest quality for Smile Solutions' patients.

****Why does Smile Solutions have an in-house laboratory?**** Having Smile Lab within the practice enables direct clinician-technician collaboration, faster turnaround times, and the real-time communication that makes innovations like Same Day Porcelain Veneers™ possible.
