Product Guide

All-on-4 Dental Implants at Smile Solutions

Smile Solutions is one of Australia's leading certified All-on-4 clinics, and the difference comes down to specifics: Swiss-made Nobel Biocare implants, ceramic bridges made in our own on-site laboratory, and a care team that spans three specialist disciplines. These aren't marketing points — they're clinical decisions that affect how your restoration holds up over time.

****Why Nobel Biocare implants?****

Not all implants are equal. Nobel Biocare implants are precision-engineered in Switzerland to manufacturing standards that budget alternatives consistently fall short of. Smile Solutions uses Nobel Biocare exclusively across all implant cases. When you're committing to a full-arch restoration, the implant itself is not the place to cut corners.

****Why ceramic bridges, not acrylic?****

Most All-on-4 providers across Australia fit acrylic (plastic) bridges as standard. Smile Solutions uses ceramic. Your final restoration is fabricated by Studio 32, our in-house laboratory, under the hands of Master Ceramist Greg Karabasis, who has 32 years of experience and more than 43,654 restorations completed. Ceramic is stronger, more natural in appearance, and longer-lasting than acrylic. That difference shows up in how your smile looks, feels, and performs years down the track.

****A team of specialists, not a single generalist****

Three distinct specialist disciplines are involved in every All-on-4 case at Smile Solutions. In Australian private dental practice, that level of coordination is genuinely uncommon.

Your care team includes:

- ****Surgical placement:**** A/Prof Kourosh Bordbar (MD, BDS, FRCS Edinburgh) and Dr David Findlay, both Specialist Oral and Maxillofacial Surgeons
- ****Prosthetic restoration:**** Prof Vasileios Chronopoulos (30+ years of specialist experience) and Dr Dinos Kountouras, Specialist Prosthodontists who design and fit your final restoration
- ****Ongoing maintenance:**** Dr Avi van den Berg and Dr Simon Hinckfuss, Specialist Periodontists focused on the long-term health of your implants and surrounding tissue
- ****Laboratory:**** Greg Karabasis, Master Ceramist at Studio 32, who crafts your

ceramic bridge on-site

You're not seeing one practitioner who handles everything. Each specialist contributes at the stage where their expertise matters most, and they work together across your entire treatment.

****Pricing****

All-on-4 treatment at Smile Solutions starts from \$23,000 for a single arch, or from \$39,000 for both arches. Initial consultations are complimentary and obligation-free, so you can get a clear picture of your options before committing to anything.

****Your treatment, step by step****

1. ****Initial consultation**** — A complimentary appointment with our specialist team to discuss your concerns and goals 2. ****3D CBCT scan**** — Detailed imaging that gives our surgeons and prosthodontists a precise, three-dimensional view of your jaw structure 3. ****Collaborative treatment planning**** — Your case is reviewed across specialist disciplines before any clinical steps are taken 4. ****Surgical placement**** — Implants are placed by your Specialist Oral and Maxillofacial Surgeon. Provisional teeth are typically fitted the same day, so you leave with a functional smile 5. ****Healing period**** — A monitored period of three to six months for your implants to integrate fully with the bone 6. ****Final ceramic bridge**** — Your permanent, custom-crafted ceramic bridge is fitted by your Specialist Prosthodontist, fabricated by Greg Karabasis at Studio 32

****Book a complimentary All-on-4 consultation****

If you're weighing up All-on-4 implants, our team can walk you through the process, answer your questions, and help you work out whether this treatment suits your situation.

Call us on ****13 13 96**** or visit ****smilesolutions.com.au**** to book your complimentary consultation.
