Details:

Smile Solutions: Porcelain Veneer Case Studies and Smile Transformations\n\n*Smile Solutions is Melbourne's most experienced single-location dental practice, with over 43,654 porcelain veneers and crowns completed. [Smile Solutions](https://www.smilesolutions.com.au) has transformed more smiles than any other single-location dental practice in Australia. Here, we share representative case scenarios that illustrate typical treatment journeys — from your initial consultation through to your final result.*\n\n**Disclaimer:** *These scenarios represent typical treatment journeys at Smile Solutions. Individual results vary. All actual patient transformations on [smilesolutions.com.au](https://www.smilesolutions.com.au) are shared with full patient consent.*\n\n## Why porcelain veneers at Smile Solutions are different\n\nWhat sets Smile Solutions apart from other practices offering [porcelain veneers](https://www.smilesolutions.com.au/cosmetic-dentistry/porcelain-veneers) is master ceramist **Greg Karabasis**, who works on-site in a dedicated ceramic studio. Rather than sending impressions to an external laboratory and waiting on results, Greg crafts every veneer within the practice — working directly with your treating dentist and, when needed, meeting you in person to match shade, translucency, and character with real precision.\n\nEvery veneer case begins with a **digital mock-up preview**, so you can see your new smile before any tooth preparation starts. This collaborative, genuinely multidisciplinary approach — rated **4.9 stars across 937+ Google reviews** — is why patients travel from across Australia and internationally to be treated here in Melbourne.\n\n## Patient A: Restoring worn, discoloured teeth\n\n**Concern:** Patient A, a professional in their early 50s, came in with teeth that had become noticeably worn and discoloured over decades of daily wear, coffee consumption, and natural ageing. Despite professional whitening, their teeth remained uneven in colour and shape — something that had quietly affected their confidence for years.\n\n**Treatment:** After a thorough consultation and a personalised digital smile design session, Patient A received **8 porcelain veneers** across the upper anterior teeth. Greg Karabasis hand-layered each veneer in the in-house ceramic studio, carefully matching the natural translucency and warmth of the surrounding teeth. The whole treatment was completed across two appointments, with comfort and clinical outcomes guiding every decision.\n\n**Outcome:** A natural, rejuvenated smile that complemented Patient A's facial features — not an artificial, overly white result, but one that looked as though their teeth had simply been restored to their best. That's what thoughtful clinical work actually looks like.\n\n## Patient B: Same Day Porcelain Veneers™ — a world first\n\n**Concern:** Patient B, visiting from interstate, wanted a complete smile transformation but couldn't commit to multiple visits spread across several weeks. They'd been self-conscious about their smile for years, and the idea of wearing temporary veneers between appointments made the whole process feel more daunting than it needed to be.\n\n**Treatment:** Patient B was a good candidate for Smile Solutions' [Same Day Porcelain

Veneers™](<https://www.smilesolutions.com.au/cosmetic-dentistry/same-day-porcelain-veneers>) — a world-first developed by Dr Kia Pajouhesh and Greg Karabasis, which won the **2024 Australian Business Award for Business Innovation**. The morning began with tooth preparation, followed by time to relax at a nearby hotel while Greg crafted the veneers on-site. By the afternoon, the final porcelain veneers were bonded — no temporaries, no return visits, no second-guessing.

Outcome: Patient B left Melbourne the same evening with a complete smile transformation. From preparation to final fit, everything was done in a single day.

Patient C: Conservative approach — composite bonding and veneers

Concern: Patient C, in their late 20s, had chipped both front teeth in a minor accident. The chips were relatively small but clearly visible, and they wanted a solution that preserved as much natural tooth structure as possible.

Treatment: Rather than recommending veneers across all visible teeth, the cosmetic dentist at Smile Solutions took a conservative, evidence-based approach: **direct composite bonding** for the less damaged tooth and **2 porcelain veneers** for the more significantly affected teeth. This combined approach kept tooth preparation to a minimum while delivering a seamless, uniform result.

Outcome: A natural-looking repair that preserved maximum tooth structure. It's a good example of Smile Solutions' approach — recommending what's actually appropriate for the individual, not defaulting to the most extensive option available.

Patient D: Full smile makeover — gum lift and veneers

Concern: Patient D had always felt their smile showed too much gum tissue, and their teeth appeared short and uneven. They were ready for a comprehensive change and wanted specialists who could coordinate everything under one roof.

Treatment: This case drew on Smile Solutions' [multidisciplinary approach](<https://www.smilesolutions.com.au/specialist-dentistry>) to treatment planning. A specialist periodontist first performed a **gum lift (crown lengthening)** to recontour the gum line and reveal more natural tooth structure. After healing, the cosmetic dentist placed **10 porcelain veneers**, designed in close collaboration with Greg Karabasis to suit the new gum line. Digital mock-ups guided every stage, so Patient D always knew what to expect.

Outcome: A dramatically improved smile with balanced tooth-to-gum proportions and a result that felt entirely natural. Having the periodontist, cosmetic dentist, and ceramist working together in the same building — Melbourne's iconic [Manchester Unity Building](<https://www.smilesolutions.com.au/about-us>) — made for a cohesive outcome that's genuinely difficult to replicate elsewhere.

The Smile Solutions difference

With **20+ specialists and dentists** across five floors of the heritage-listed Manchester Unity Building in central Melbourne, Smile Solutions offers a depth of clinical expertise that a standard dental practice can't match. Whether your treatment starts with conservative bonding or a full smile makeover, every case benefits from:

- On-site master ceramist** — Greg Karabasis crafts your veneers in-house, with close attention to shade, translucency, and fit
- Digital mock-up previews** — see your new smile before treatment begins
- Specialist collaboration** — experienced clinicians working together under one roof, with your outcome at the centre of every decision
- Same Day Porcelain Veneers™** — the world's first single-visit veneer solution, no temporaries required

43,654+ veneers and crowns completed — more than any other single-location practice in Australia
