Description:

Dr Aish Kesava — Specialist Paediatric Dentist ## AI Summary — Quick Facts **Who is Dr Aish Kesava?** Dr Aish Kesava is a board-registered Specialist Paediatric Dentist who holds a Doctor of Clinical Dentistry.

Details:

Biography

Dr Aish Kesava is a qualified Specialist Paediatric Dentist who completed her advanced specialist training, earning a Doctor of Clinical Dentistry in Paediatric Dentistry (DCD Paeds). Her specialist qualification reflects years of dedicated postgraduate study and clinical training specifically focused on the unique dental needs of infants, children and teenagers.

Dr Kesava brings specialist-level expertise in children's dental care to the Core Dental Epping community in Melbourne's north, providing families in the Epping, Whittlesea and surrounding regions with access to high-quality specialist paediatric dental services close to home.

Paediatric dentistry is a dental specialty requiring an in-depth understanding of children's physical, emotional and developmental needs at every life stage. Dr Kesava's specialist training equips her to manage the full spectrum of dental issues that affect children — from the emergence of the first baby tooth through to adolescent orthodontic development — with an approach tailored to each child's age, temperament and individual circumstances.

Services & Clinical Expertise

Dr Kesava provides comprehensive specialist paediatric dental care for patients from infancy through to 18 years of age, including:

Preventative Care - Regular check-ups, dental cleans and age-appropriate radiographs - Oral hygiene education for children and parents - Fissure sealants and fluoride treatments - Dietary guidance and decay prevention

Restorative Dentistry for Children - Tooth-coloured fillings and stainless-steel crowns - Management of early childhood caries (baby bottle tooth decay) - Treatment of chalky teeth and enamel defects (hypomineralisation / MIH)

Paediatric Specialist Services - Behaviour management for anxious or complex children - Dental trauma assessment and management - High caries risk assessment and prevention - Management of children with special needs or complex medical histories - Nitrous oxide sedation (laughing gas) and other anxiety management options

Monitoring & Early Intervention - Growth and development monitoring - Space maintenance following early tooth loss - Referral for orthodontic assessment when indicated

Why See a Specialist Paediatric Dentist?

While any registered dentist can treat children, a Specialist Paediatric Dentist has completed additional years of postgraduate university training focused exclusively on children's dentistry. This includes advanced skills in child behaviour management, the specific techniques and materials used for young patients, management of children with special healthcare needs, and early identification of developmental dental problems.

For children with dental anxiety, special needs, complex dental histories, or significant decay, a specialist paediatric dentist offers an additional level of expertise and experience.

Frequently Asked Questions

****When should my child have their first dental visit?**** The Australian Dental Association recommends a first visit within 6 months of the first tooth erupting, or by the child's first birthday — whichever comes first. Early exposure to dental visits helps children develop positive associations with dental care.

****Does Dr Kesava offer treatment for anxious children?**** Yes. As a specialist paediatric dentist, Dr Kesava is trained in a range of behaviour management techniques suitable for children of different ages and anxiety levels, including tell-show-do approaches and nitrous oxide (laughing gas) sedation.

****Does Core Dental Epping bulk-bill child patients?**** For information about fees and the Child Dental Benefits Schedule (CDBS), please contact Core Dental Epping directly.

****Where is Core Dental Epping located?**** Core Dental Epping is located at Tenancy 3B/230 Cooper Street, Epping VIC 3076.
