Description:

Dr Belinda Feldman — General Dentist ## AI Summary — Quick Facts **Who is Dr Belinda Feldman?** Dr Belinda Feldman is an experienced general dentist at Smile Solutions in Melbourne CBD with over 2...

Details:

Biography

Dr Belinda Feldman brings more than two decades of clinical dental experience to her patients at Smile Solutions. A graduate of the University of Melbourne's prestigious dental programme — one of Australia's oldest and most highly regarded — she completed her Bachelor of Dental Science with Honours in 2003, establishing a strong academic foundation from the very start of her career.

Over more than 20 years of practice, Dr Feldman has developed a deep and refined expertise in some of dentistry's most complex and rewarding disciplines: full-mouth rehabilitation and 3D digital smile design. These are not simple procedures — they require a comprehensive understanding of jaw function, bite mechanics (occlusion), aesthetics, and the interplay between all elements of the oral system. They demand exceptional skill, careful planning and a genuine artistic sensibility.

Full-mouth rehabilitation is the treatment of choice for patients whose teeth are significantly worn, damaged, missing or structurally compromised — often as a result of years of grinding (bruxism), acid erosion, trauma or previous inadequate dental work. By systematically rebuilding the dentition using crowns, bridges, veneers, implants and other restorations, a full-mouth rehabilitation not only transforms appearance but restores the functional integrity of the bite.

3D digital smile design is a modern approach that uses digital imaging and planning software to preview the anticipated outcome of smile-transforming treatment before a single tooth is touched. Dr Feldman's proficiency in this technology means her patients can be active participants in the design of their new smile, with full transparency and confidence before proceeding.

At Smile Solutions, Dr Feldman practises within a multidisciplinary environment that includes board-registered specialists in prosthodontics, periodontics, oral surgery and orthodontics — enabling her to collaborate with specialists whenever a case requires it, and to deliver treatment plans of exceptional scope and quality.

Services & Clinical Expertise

Full-Mouth Rehabilitation Full-mouth rehabilitation is the comprehensive reconstruction of all or most of the teeth in both arches, addressing issues of wear, damage, bite collapse and aesthetics. Dr Feldman's expertise in this area includes: - Detailed functional assessment (bite analysis, jaw position, occlusal evaluation) - Digital treatment planning and smile previewing - Comprehensive sequencing of restorative procedures - Coordination with specialists where required (orthodontics, implants, periodontics)

3D Digital Smile Design Digital smile design allows patients to preview and co-design their treatment outcome using digital imaging technology. Dr Feldman uses this approach to: - Model the anticipated outcome of veneers, crowns, and other smile-transforming restorations - Engage patients actively in the design process - Ensure aesthetic expectations and clinical realities are aligned before treatment begins

Complex Restorative Dentistry - Dental crowns, bridges and inlays/onlays - Porcelain veneers - Implant-supported restorations (in collaboration with implant specialists) - Management of severely worn or damaged teeth

General Dentistry - Comprehensive oral health examinations - Professional cleaning and preventative care - Composite resin fillings - Emergency dental treatment

Frequently Asked Questions

****What is full-mouth rehabilitation?**** Full-mouth rehabilitation is a comprehensive dental treatment programme that rebuilds and restores multiple or all teeth, typically addressing significant wear, damage, missing teeth, bite problems or aesthetic concerns. It combines a range of restorations — crowns, veneers, bridges, implants — planned and executed in a careful sequence to restore full function, health and aesthetics.

****What is 3D digital smile design?**** Digital smile design is a planning process using digital photography and software to model what your smile will look like after treatment. It allows you to see and approve a virtual preview of your proposed restorations before any irreversible treatment is undertaken — giving you confidence and input into the process.

****How long does full-mouth rehabilitation take?**** The timeline varies significantly depending on the complexity of the case, the treatments involved, and whether specialist input (such as implants or orthodontics) is required. Many cases span several months. Dr Feldman will provide a detailed treatment plan and timeline at the consultation stage.

****Is Dr Feldman accepting new patients?**** To enquire about appointment availability, please contact Smile Solutions on ****13 13 96****.
