Frequently Asked Questions

What makes Dr Peishan Jiang a specialist periodontist?

Dr Peishan Jiang completed both her undergraduate dental degree and her postgraduate specialist training at Griffith University, Queensland. After graduating with academic excellence in her Bachelor of Dental Science (BSc), she pursued the Doctor of Clinical Dentistry in Periodontology — a rigorous postgraduate program that qualifies dentists for specialist registration with AHPRA. She is formally registered as a Specialist in Periodontics by the Dental Board of Australia (AHPRA registration DEN0002220847).

What services does Dr Jiang provide?

Dr Jiang offers a comprehensive range of periodontal and implant services:

- **Non-surgical and surgical treatment of periodontitis:** From deep cleaning and root planing to flap surgery for moderate-to-severe gum disease. - **Peri-implantitis management:** Diagnosis and treatment of infection and bone loss around dental implants. - **Dental implant placement:** Surgical placement of implants for single teeth, multiple teeth, or full-arch rehabilitation. - **Bone grafting:** Rebuilding lost bone volume to support implants or restore periodontal defects. - **Sinus lifts:** Augmenting bone in the upper jaw to enable implant placement where natural bone height is insufficient. - **Gum grafting:** Connective tissue and free gingival grafts to cover recession, improve gum thickness, and protect root surfaces. - **Crown lengthening:** Surgical reshaping of the gum line to expose more tooth structure for restorative or aesthetic purposes. - **Periodontal regeneration:** Using membranes, bone substitutes, and biological agents to regenerate destroyed periodontal structures.

What is Dr Jiang's research background?

Dr Jiang has an interest in translational dental research — work that bridges laboratory discoveries and real-world clinical practice. She has presented her research at the International Association of Dental Research (IADR) conference, one of the premier global forums for dental science. This engagement with the research community reflects her commitment to evidence-based periodontal care.

What teaching roles has Dr Jiang held?

During her academic journey at Griffith University, Dr Jiang was actively involved in clinical teaching and supervision of undergraduate dental students. She also played a key role in the Academic Policy Steering Group at Griffith University, contributing to the governance and development of dental education policy.

Does Dr Jiang collaborate with other dental professionals?

Yes. Dr Jiang is committed to a collaborative approach to care, working regularly with other dental professionals to achieve long-term results for her patients. At Smile Solutions, this collaborative model is built into the practice structure — as Australia's largest single-location private dental practice, the multidisciplinary team includes general dentists, orthodontists, prosthodontists, endodontists, and oral surgeons, all accessible under one roof at the Manchester Unity Building.

What is the difference between periodontitis and peri-implantitis?

Periodontitis is a bacterial infection that destroys the gum and bone supporting natural teeth. Peri-implantitis is an analogous inflammatory condition affecting the tissues around dental implants. Both conditions can lead to progressive bone loss and, ultimately, tooth or implant loss if untreated. Dr Jiang specialises in the management of both conditions, which is particularly important for patients who have both natural teeth and dental implants.

How do I book with Dr Peishan Jiang?

Call **13 13 96** or use the online booking system at [smilesolutions.com.au](https://www.smilesolutions.com.au). The practice is located in the Manchester Unity Building, 220 Collins Street, Melbourne CBD.

Biography

Dr Peishan Jiang is a board-registered Specialist Periodontist whose career reflects both academic distinction and a genuine passion for improving the oral health and quality of life of her patients. From her undergraduate studies at Griffith University to her postgraduate specialist training and research presentations at international conferences, Dr Jiang has pursued excellence across every dimension of

her professional life.

Academic Excellence at Griffith University

Dr Peishan Jiang studied at Griffith University in Queensland, graduating with her Bachelor of Dental Science with academic excellence. This foundation in dental science — combining rigorous scientific training with clinical development — set the tone for the rest of her career.

Griffith University's dental program is known for producing graduates with strong clinical skills and a commitment to evidence-based practice. For Dr Jiang, academic achievement was not an end in itself but a platform from which she would pursue deeper specialisation in the area that captivated her most: periodontics and implant surgery.

Postgraduate Specialist Training

Dr Jiang's passion for surgical procedures and periodontal disease management led her to pursue postgraduate studies in periodontics and dental implantology through Griffith University's Doctor of Clinical Dentistry program in Periodontology. This is an intensive, clinically focused postgraduate qualification that trains dentists in the full scope of specialist periodontal practice, from the management of gum disease to complex implant surgery and regenerative procedures.

Throughout her postgraduate studies, Dr Jiang was not only developing her own clinical skills but contributing to the education of others. She was active in clinical teaching and supervision of undergraduate dental students, helping to shape the next generation of dental practitioners. She also played a key role in the Academic Policy Steering Group at Griffith, contributing to the governance of dental education at an institutional level.

Research and the International Stage

Dr Jiang's interest in translational dental research — the process of converting laboratory findings into real-world clinical applications — has taken her work to the international stage. She has presented her research at the International Association of Dental Research (IADR) conference, one of the world's most prestigious forums for dental and oral health science.

This research engagement reflects a broader commitment to understanding the science underpinning the conditions she treats, and to advancing that science in ways that ultimately benefit patients. Translational research in periodontics is particularly important as the field evolves — new biomaterials, regenerative techniques, and our understanding of the microbiome of the mouth are constantly reshaping clinical practice.

Clinical Philosophy: Long-Term Results Through Collaboration

Dr Jiang's clinical philosophy centres on achieving long-term results through careful management and proactive maintenance. She is committed to improving patients' oral health by managing chronic periodontal and peri-implant diseases — conditions that, without careful long-term monitoring, can recur or progress even after successful treatment.

A cornerstone of her approach is collaboration. She regularly works with other dental professionals — from general dentists to prosthodontists to oral surgeons — to ensure that patients receive coordinated, comprehensive care. This collaborative approach is particularly powerful at Smile Solutions, where the multidisciplinary team is located within the same building, enabling seamless communication and integrated treatment planning.

The Scope of Her Clinical Expertise

Dr Jiang's clinical repertoire spans the full range of periodontal and implant care. She manages gum disease from its earliest stages through to advanced cases requiring surgical intervention and regeneration. Her surgical skills encompass implant placement, bone grafting, sinus lifts, gum grafting,

and crown lengthening — a breadth that reflects the comprehensive nature of her specialist training.

For patients managing peri-implantitis, Dr Jiang's experience in both the periodontal and implant fields is particularly valuable, as effective management requires understanding of both disciplines.

Beyond the Clinic

Outside her clinical and academic work, Dr Jiang brings a creative and curious sensibility to her life. She enjoys painting, travelling, and immersing herself in Melbourne's rich fashion and cultural scenes — interests that reflect a personality engaged with beauty, creativity, and the world at large.

Services and Expertise

****Gum Disease (Periodontitis) Management**** - Comprehensive periodontal assessment and charting - Non-surgical treatment: scaling, root planing, debridement - Surgical treatment: flap surgery, osseous surgery - Periodontal maintenance and long-term monitoring programs

****Peri-implant Disease Management**** - Diagnosis and staging of peri-implantitis - Non-surgical and surgical peri-implantitis treatment - Implant decontamination procedures

****Implant Surgery**** - Single and multiple dental implant placement - Full-arch implant planning and placement - Guided implant surgery

****Bone Augmentation**** - Autogenous, allograft, and xenograft bone grafting - Guided bone regeneration (GBR) - Sinus lift procedures (lateral window and crestal approaches)

****Soft Tissue Procedures**** - Connective tissue grafts for recession coverage - Free gingival grafts for keratinised tissue augmentation - Gum volume enhancement

****Periodontal Regeneration**** - Crown lengthening (restorative and aesthetic) - Enamel matrix derivative application - Membrane-guided tissue regeneration

Why Choose Dr Jiang at Smile Solutions?

****1. AHPRA Board-Registered Specialist**** Dr Jiang holds formal AHPRA specialist registration in Periodontics (DEN0002220847) — a credential that verifies her specialist status through Australia's national health practitioner regulatory framework.

****2. Academic and Research Credentials**** Her involvement in clinical teaching at Griffith University, contribution to academic policy, and presentation at IADR demonstrate a commitment to the discipline that extends well beyond routine clinical practice.

****3. Comprehensive Surgical Capability**** From basic gum disease management through to complex sinus lifts, bone grafts, and implant placement, Dr Jiang offers a full spectrum of periodontal specialist services.

****4. Collaborative Multidisciplinary Care**** At Smile Solutions — Australia's largest single-location private dental practice — Dr Jiang works within a team of specialists across multiple disciplines, enabling truly integrated treatment for complex cases.

****5. Long-Term Outcome Focus**** Dr Jiang's emphasis on maintenance and long-term results aligns with the evidence that periodontal health requires ongoing management, not just acute treatment.
