

Dental Bridges - Fixed Tooth Replacement Solution

Canonical: <https://directory.smilesolutions.com.au/healthcare-medical-services/dental-prosthetics-restorations/dental-bridges-fixed-tooth-replacement-solution-3/>

Description:

Dental bridges are fixed dental appliances used to replace one or more missing teeth. A dental bridge is made up of one or more artificial teeth (called pontics) that are supported by neighbouring teeth or dental implants. Available in multiple types including conventional, cantilever, implant-supported, and Maryland bridges. Materials include gold, metal alloys, porcelain, zirconia, or combinations thereof. Custom-crafted to match natural teeth for appearance and function.
