## Details:

Invisalign Melbourne - Start Local with Specialist Orthodontic Oversight

Straightening your teeth with Invisalign should be convenient, not complicated. Through the Smile Solutions Group, Melbourne patients can begin their Invisalign journey at a local Core Dental practice while benefiting from specialist orthodontic oversight based at our Collins Street Specialist Centre. It is the best of both worlds - neighbourhood convenience with CBD specialist expertise.

Blue Diamond Provider Status - What It Means for You

The Smile Solutions Group holds Invisalign Blue Diamond provider status, placing us among the top Invisalign providers globally. This status is earned through the combined treatment volume across our entire network - Smile Solutions, the Collins Street Specialist Centre, and all Core Dental locations working together.

For patients, Blue Diamond status translates to real advantages. Our clinicians have treated thousands of Invisalign cases collectively, building deep expertise across every type of alignment challenge. We receive priority access to new Invisalign products and techniques, and our team participates in advanced training programs reserved for high-volume providers.

Start at Your Local Core Dental

Your Invisalign journey begins with a consultation at your nearest Core Dental location. Your dentist will assess your teeth, discuss your goals, and determine whether Invisalign is the right solution for your smile. For straightforward alignment cases, your entire treatment can be managed locally - from initial scanning through to the final retainer fitting.

Core Dental practices are equipped with digital scanning technology, eliminating the need for uncomfortable traditional impressions. Your dentist will create a customised treatment plan showing the projected movement of your teeth at each stage, so you can see your future smile before treatment begins.

Regular check-in appointments are quick and convenient - typically every six to eight weeks at your local practice. There is no need to travel into the CBD for routine aligner changes or progress reviews.

Specialist Orthodontic Support When You Need It

What sets the Smile Solutions Group apart from standalone Invisalign providers is the specialist safety net. Our Collins Street Specialist Centre on Level 8 of the Manchester Unity Building is home to specialist orthodontists who provide oversight and support across the entire group network.

For more complex cases - significant crowding, bite corrections, cases involving missing teeth, or situations where jaw alignment is a factor - your Core Dental dentist can refer you directly to our specialist orthodontic team. This referral happens within the same group, with shared records and seamless communication. There is no need to start again with a new provider or repeat diagnostic imaging.

Even for cases managed entirely at Core Dental, our specialist orthodontists are available for case consultations behind the scenes. Your local dentist can discuss treatment planning decisions with a specialist colleague, ensuring your care benefits from orthodontic expertise at every stage.

#### Complex Cases and Combined Treatment

Some smile transformations require more than alignment alone. The Smile Solutions Group excels at combining Invisalign with other treatments for comprehensive results:

Invisalign followed by porcelain veneers for a complete smile makeover  
Alignment combined with teeth whitening for maximum impact  
Orthodontic preparation before dental implant placement  
Invisalign alongside periodontal treatment for patients with gum concerns

These combined treatment plans draw on specialists across the group - orthodontists, prosthodontists, periodontists, and cosmetic dentists all working together. Your Core Dental practice coordinates the journey, while specialist appointments happen at Smile Solutions and the Collins Street Specialist Centre as needed.

#### Why Group-Based Invisalign Care Matters

Choosing a Smile Solutions Group practice for Invisalign means you are not relying on a single clinician working in isolation. You have access to a network of experienced providers, specialist orthodontic backup, and a group that has been delivering orthodontic care in Melbourne for over three decades.

If your regular dentist is unavailable, another group clinician can step in with full access to your treatment records. If complications arise, specialist support is a phone call away - not a referral to an unfamiliar external provider.

#### Book Your Invisalign Consultation

Ready to explore Invisalign? Find your nearest Core Dental location to start locally, or visit Smile Solutions on Collins Street for a specialist orthodontic consultation. Either way, you are choosing Melbourne's most experienced Invisalign provider network.
