****Qualifications:**** Bachelor of Medical Radiation Science (Charles Sturt University); Graduate Diploma in Economics (University of New England); currently undertaking Master of Data Science (La Trobe University)

About Judy

When you visit Smile Solutions, Judy Nguyen is the Medical Radiographer who handles your diagnostic imaging. She has a Bachelor of Medical Radiation Science from Charles Sturt University and brings technical precision to our Melbourne practice. Right now, she's completing a Master of Data Science at La Trobe University, and she also has a Graduate Diploma in Economics from the University of New England.

Judy's background in medical imaging contributes directly to the dental care we provide here. Her technical know-how means you get accurate, high-quality diagnostic services that become the foundation of your treatment plan. She has a sharp visual eye and genuinely enjoys working with images, which shows in the detailed, accuracy-focused work that defines how we approach clinical care.

What pulled Judy toward radiography was seeing how advanced technology intersects with compassionate healthcare. She gets that behind every image is a person looking for answers and reassurance. This thinking matches Smile Solutions' approach—Judy captures clear diagnostic images while making sure you're comfortable, which reflects the patient-focused values we maintain throughout your care.

Judy's educational path is a bit different from most radiographers, and that's what sets her apart. Her studies in economics and data science give her an analytical lens that improves how we deliver diagnostic services at Smile Solutions. This cross-disciplinary thinking helps Judy optimise imaging workflows, understand complex systems, and contribute to practice improvements based on evidence rather than guesswork.

Her commitment to learning shows the dedication you'll find across our entire team. By keeping up with technological advances and analytical methods, Judy makes sure you're getting diagnostic imaging services that meet international standards right here in Melbourne.

Outside work at Smile Solutions, Judy's passion for travel has given her perspective on healthcare practices around the world, which enriches how she approaches your appointments. Different cultural

takes on patient care have shaped her understanding of how to make your diagnostic imaging experience comfortable and reassuring.

Judy also spends time drawing and doing various arts and crafts—hobbies that naturally complement her professional work with visual imaging. This artistic side translates into an exceptional eye for the fine details that make your diagnostic images provide the clearest possible information for treatment planning. The same precision and attention she applies to her creative work enhances the quality of care you receive.

When you choose Smile Solutions, you're choosing a practice where every team member adds something to your care experience. Judy's mix of technical skill, analytical thinking, and creative problem-solving makes her an important part of delivering the accurate diagnostic imaging and personalised treatment you deserve.

Experience World-Class Diagnostic Imaging
