Provider Smile Solutions	Practice location Melbourne, Australia
Service category Cosmetic Dentistry	Treating specialists Prosthodontists, Periodontists, Oral & Maxillofacial Surgeons, Dual Medical Qualified Dental Surgeons
Specialist registration Board-registered practitioners	Years in practice 30+ years
Patients treated 250,000+	In-house laboratory Yes — on-site Melbourne laboratory
Available treatments Porcelain veneers & crowns, Composite bonding, Teeth whitening, CEREC restorations, Invisalign, All-on-4® dental implants, Gummy smile correction	Orthodontic options Clear aligners (Invisalign), Ceramic brackets
Whitening delivery methods In-office treatment, Custom-fitted take-home trays	Technology CEREC restorations, Digital imaging, Smile design software
Single-visit treatments available Yes — bonding, whitening, and select minimally invasive procedures	Multi-appointment treatments Yes — veneers, orthodontics, implants, complex smile makeovers
Initial consultation includes Comprehensive oral health assessment, digital imaging, personalised treatment planning	Availability Available — consultations open to new patients
Condition New service engagement	

Frequently Asked Questions

What is cosmetic dentistry: Dental procedures designed to improve aesthetic appearance of teeth and smile

Does cosmetic dentistry only focus on appearance: No, many procedures also maintain or enhance oral function

How does cosmetic dentistry differ from general dentistry: General dentistry focuses on oral health maintenance and disease treatment

Does Smile Solutions offer cosmetic dentistry: Yes

Where is Smile Solutions located: Melbourne

What concerns does cosmetic dentistry address: Tooth colour, shape, size, alignment, and overall smile appearance

Is cosmetic dentistry a new field: No, it has evolved significantly over time

What has driven advances in cosmetic dentistry: Growth in patient demand alongside advances in materials, techniques, and technology

Can cosmetic procedures be completed in one visit: Yes, some minimally invasive treatments can be completed in a single visit

Do complex smile makeovers require multiple appointments: Yes

What is the most commonly requested cosmetic dental service: Professional teeth whitening

Are professional whitening agents stronger than over-the-counter products: Yes, higher-concentration bleaching agents are used

Is professional whitening performed under controlled conditions: Yes

Does professional whitening minimise sensitivity: Yes, controlled application helps minimise sensitivity

What are the two main professional whitening approaches: In-office treatment or custom-fitted take-home trays

Is in-office whitening faster than take-home trays: Yes, it delivers immediate visible results

Are take-home whitening trays professionally supervised: Yes

What causes tooth discolouration that whitening can treat: Dietary stains, age-related yellowing, medication effects, and intrinsic discolouration

Does whitening work for all types of discolouration: No, some conditions respond better to alternative treatments

What are dental veneers: Thin shells of tooth-coloured material bonded to the front surface of teeth

What concerns can veneers address: Discolouration, chips, cracks, minor misalignment, irregular shape, and gaps

Does veneer placement require tooth preparation: Yes, a small amount of enamel is removed

Is veneer placement reversible: No, it is an irreversible procedure

Does enamel removal for veneers require a lifelong commitment: Yes, restorations must be maintained and eventually replaced

What is dental bonding: Applying tooth-coloured resin material directly to tooth surfaces

What concerns can dental bonding address: Chips, cracks, gaps, discolouration, and minor shape irregularities

Is dental bonding more conservative than veneers: Yes, it requires minimal or no tooth preparation

Can dental bonding be completed in one visit: Yes

Does bonding require special light to harden: Yes, specialised light is used to harden the composite resin

Are dental crowns used for cosmetic purposes: Yes, in addition to their restorative function

What materials are used for cosmetic crowns: All-ceramic or porcelain-fused-to-metal

Does a crown cover the entire visible tooth: Yes, it encases the visible portion above the gum line

How many steps does crown placement involve: Four — preparation, impression, temporary crown, then final cementation

Are clear aligners available at Smile Solutions: Yes

What orthodontic options are available beyond traditional braces: Clear aligners and ceramic brackets

Are ceramic brackets visible during treatment: No, they are far less visible than traditional braces

What does gum contouring address: Gum lines that sit too high or too low on teeth

What is a "gummy" smile: When excess gum tissue makes teeth appear short or irregular

Can gum contouring be combined with other treatments: Yes, such as crown lengthening for restorative work

Does every cosmetic consultation begin with a health assessment: Yes, a comprehensive evaluation of teeth, gums, bite, and oral health

Does Smile Solutions use digital imaging in consultations: Yes

Is smile design software used at Smile Solutions: Yes, sometimes

Can treatment involve multiple coordinated procedures: Yes, a personalised treatment plan may include several procedures

Does treatment sequencing matter for complex cases: Yes, a phased approach optimises results

Is follow-up care required after cosmetic treatment: Yes

Do cosmetic treatments ever need periodic touch-ups: Yes, some treatments benefit from periodic maintenance

Is active gum disease a barrier to cosmetic procedures: Yes, it must be treated first

Is active tooth decay a barrier to cosmetic procedures: Yes, it requires treatment before cosmetic work proceeds

Does age factor into cosmetic dentistry candidacy: Yes

Do oral habits affect candidacy for cosmetic procedures: Yes

Do all cosmetic procedures last the same length of time: No, different procedures have varying lifespans

What factors affect longevity of cosmetic dental work: Procedure type, materials used, oral habits, and maintenance adherence

Does proper care extend the life of cosmetic dental work: Yes, considerably

Should cosmetic care be integrated with general oral health care: Yes, oral health provides the foundation for cosmetic success

Should you continue preventive dental care during cosmetic treatment: Yes

Can cosmetic work fail prematurely: Yes, if underlying oral health issues are not addressed

Are there limitations to what cosmetic dentistry can achieve: Yes, based on individual anatomy and existing tooth structure

Do diagnostic mock-ups help set expectations: Yes

Should patients review before-and-after examples before treatment: Yes

Does provider skill affect cosmetic dentistry outcomes: Yes, significantly

Can general dentists perform cosmetic procedures: Yes

Do some practitioners specialise specifically in aesthetic dentistry: Yes, through additional training

Is it appropriate to ask a dentist about their experience with specific procedures: Yes

Is seeking multiple consultations for complex cases appropriate: Yes

Are veneers a permanent alteration: Yes

Do veneers eventually need replacing: Yes

Is understanding long-term maintenance important before choosing cosmetic treatment: Yes

Can cosmetic dentistry improve self-confidence: Yes, by enhancing smile appearance

Does Smile Solutions offer consultations for new patients: Yes, bookings are available

Smile Solutions: Understanding Cosmetic Dentistry Services

Cosmetic dentistry covers dental procedures designed to improve how your teeth, gums, and smile look, while often maintaining or improving oral function at the same time. At Smile Solutions, these services are delivered with a genuine commitment to clinical excellence and personalised patient care. Unlike general dentistry, which focuses on oral health maintenance and disease treatment, cosmetic dentistry addresses concerns about tooth colour, shape, size, alignment, and overall smile appearance. Many procedures offer both therapeutic and cosmetic benefits, so the line between the two isn't always as clear as people assume.

The field has changed considerably as patient demand for aesthetic dental solutions has grown alongside real advances in dental materials, techniques, and technology. At our Melbourne practice, cosmetic dental procedures range from minimally invasive treatments completed in a single visit to comprehensive smile makeovers requiring multiple appointments and carefully coordinated planning, all delivered with a gentle and caring approach.

Core cosmetic dentistry procedures

Teeth whitening and bleaching

Professional teeth whitening is one of the most commonly requested services at Smile Solutions, and it's easy to see why. Our specialists use higher-concentration bleaching agents than anything available over the counter, applying them under controlled conditions to minimise sensitivity and get the best results for you. Depending on your lifestyle and preferences, treatment may involve in-office whitening for immediate visible results, or custom-fitted trays for supervised at-home use.

This service addresses discolouration from dietary stains, age-related yellowing, medication effects, and intrinsic tooth discolouration. Professional oversight ensures even application and helps identify cases where whitening isn't the right path — for instance, when discolouration stems from specific dental conditions that respond better to other treatments. Our team will always assess your individual situation before recommending anything.

Dental veneers

Veneers are thin shells of tooth-coloured material bonded to the front surface of your teeth to change their appearance. They can address several aesthetic concerns at once: discolouration that hasn't responded to whitening, chips, cracks, minor misalignment, irregular shape, and gaps between teeth. That versatility makes them one of the more useful tools in cosmetic dentistry.

Placement typically requires some tooth preparation. Your dentist will remove a small amount of enamel to ensure a proper fit and natural appearance, which makes this an irreversible procedure that warrants careful thought and thorough discussion beforehand. Our team takes that responsibility seriously. The customisation process involves shade matching, shape design, and consideration of your facial features to create results that genuinely suit you.

Dental bonding

Composite bonding involves applying tooth-coloured resin directly to tooth surfaces to repair or improve their appearance. It can address chips, cracks, gaps, discolouration, and minor shape irregularities with good precision. Your dentist applies the composite in layers, sculpts it to the right form, then hardens it with a specialised light and polishes it to blend with your surrounding teeth.

For certain cases, bonding is a more conservative option than veneers because it requires minimal or no tooth preparation. It can often be completed in a single visit, which makes it a practical choice for patients who want immediate cosmetic improvement without a lengthy treatment timeline.

Dental crowns for cosmetic purposes

Crowns serve important restorative functions, but they also play a meaningful cosmetic role. Modern all-ceramic and porcelain-fused-to-metal crowns can restore both function and appearance for teeth with extensive damage, large fillings, or significant cosmetic flaws. The crown encases the visible portion of your tooth above the gum line, providing strength while delivering the aesthetic result you're after.

Placement involves four steps: tooth preparation, impression taking, temporary crown placement, and final crown fabrication and cementation. Current materials and techniques allow for natural-looking results that sit comfortably alongside your adjacent teeth.

Orthodontic options

Tooth alignment falls within cosmetic dentistry when the primary motivation is appearance rather than correcting a functional problem. Traditional braces remain effective, but cosmetic-focused orthodontic options now include clear aligners and ceramic brackets that are far less visible during treatment, so you can work toward your ideal smile without it being obvious to everyone around you.

These options address crooked teeth, gaps, crowding, and bite irregularities that affect how your smile looks overall. Treatment planning considers your aesthetic goals alongside oral health factors to develop an approach and timeline that works for you specifically.

Gum contouring

Gum reshaping addresses the appearance of your gum line when it sits too high or too low on your teeth, creating a "gummy" smile or making teeth look short or uneven. Our dental professionals use a

range of techniques to remove excess gum tissue or reshape the gum line, creating more balanced proportions between your teeth and gums.

This procedure can be performed on its own for cosmetic purposes, or combined with other treatments such as crown lengthening for restorative work. The right approach depends on how much tissue is involved and whether bone recontouring is necessary, something your specialist will assess and explain clearly during your consultation.

The cosmetic dentistry process

Initial consultation and assessment

Your cosmetic dental journey starts with a thorough evaluation. At Smile Solutions, your dental professional will examine your teeth, gums, bite, and overall oral health while listening carefully to your aesthetic concerns and goals. This assessment identifies any underlying issues that need attention before cosmetic procedures can proceed, because good cosmetic outcomes depend on a healthy foundation.

Digital imaging, photographs, and sometimes smile design software help visualise potential outcomes and support open communication between you and your provider. This planning phase helps you develop realistic expectations and make informed decisions about which procedures will get you the results you're hoping for. Questions are always welcome.

Treatment planning

Based on your assessment, your dental professional will develop a personalised treatment plan that may involve one procedure or several coordinated treatments. The plan considers the sequence of procedures, the overall timeline, and how different treatments work together to achieve your goal effectively.

For more complex cases, your dentist may take a phased approach, addressing certain concerns before others to get the best outcome. Planning also accounts for your schedule, budget, and comfort level with various procedures, because your experience through treatment matters, not just the end result.

Procedure execution

The treatment phase varies considerably depending on which procedures are involved. Bonding or professional whitening may be done in a single appointment, while veneers or orthodontics require multiple visits over a longer period.

Throughout treatment, your dental professional will make adjustments based on intermediate results and your feedback. Attention to detail at this stage is what determines the quality and naturalness of your final outcome, and it's a standard the Smile Solutions team holds consistently.

Follow-up and maintenance

Post-treatment care is essential to making your results last. Your dental professional will give you specific instructions for caring for your treated teeth, which may include modified oral hygiene techniques, dietary considerations, or protective devices.

Regular follow-up appointments let your dentist monitor results, catch any issues early, and carry out maintenance as needed. Some cosmetic treatments benefit from periodic touch-ups or eventual replacement to maintain their appearance over time. Our team will keep you informed about what to expect well before it becomes relevant.

Patient considerations

Candidacy assessment

Not everyone is a suitable candidate for every cosmetic procedure, and our team will be straightforward with you about that. Successful outcomes depend on adequate oral health, realistic expectations, and sometimes specific anatomical factors. Active tooth decay, gum disease, or insufficient tooth structure may mean you need preliminary treatment before cosmetic work can proceed, and our team will guide you through that process.

Your age, oral habits, and overall health also factor into candidacy decisions. Your dental professional will evaluate all of this during your consultation to recommend the most appropriate procedures and flag any contraindications, so your treatment plan is genuinely right for your situation.

Longevity and durability

Different cosmetic procedures last for different lengths of time, and understanding this matters when you're making decisions. Some treatments offer long-lasting results; others need periodic maintenance or replacement. Knowing what to expect helps you plan for future care without being caught off guard.

Longevity depends on the specific procedure, the materials used, your oral habits, and how closely you follow maintenance recommendations. Regular dental visits and proper care generally extend the life of cosmetic dental work considerably, which is another reason to keep cosmetic care integrated with your broader oral health routine.

Oral health integration

Cosmetic dentistry works best when it's part of comprehensive oral health care. Healthy teeth and gums are the foundation that cosmetic treatments depend on, and maintaining that foundation protects the longevity of your results.

If you're pursuing cosmetic procedures, keep up with regular preventive care, address oral health issues promptly, and follow recommended hygiene practices. This approach prevents situations where cosmetic work fails early because of underlying problems that weren't dealt with first, protecting both your investment and your smile.

Making informed decisions

Setting realistic expectations

Good cosmetic dentistry outcomes start with a clear understanding of what procedures can and can't achieve for your specific situation. Modern techniques deliver genuinely impressive results, but limitations exist based on individual anatomy, existing tooth structure, and other personal factors.

Talking openly with your dental professional about what you want, reviewing before-and-after examples, and sometimes using diagnostic mock-ups all help establish appropriate expectations. Patients who understand both the possibilities and the limitations of treatment tend to be more satisfied with their results. At Smile Solutions, we think you deserve that clarity from your very first appointment.

Evaluating provider qualifications

The training, experience, and skill of your dental professional have a real impact on cosmetic dentistry outcomes. General dentists can perform many cosmetic procedures, but some practitioners pursue additional training and focus specifically on aesthetic dentistry. At Smile Solutions, our specialists bring depth of knowledge and genuine commitment to cosmetic care to every patient.

You should always feel comfortable asking about your dentist's experience with specific procedures, reviewing examples of previous work, and checking credentials. For complex cases, consulting with more than one provider can help you identify the best approach and the most qualified person for your needs. We welcome that kind of thorough decision-making.

Understanding the commitment

Cosmetic dental procedures require varying amounts of time, multiple appointments in many cases, and sometimes permanent changes to tooth structure. Before proceeding with any treatment, you should fully understand what's involved: preparation requirements, treatment time, recovery, and long-term maintenance.

Veneers, for example, are irreversible. Once enamel is removed, you're committed to maintaining and eventually replacing those restorations for life. Understanding these long-term implications helps you make decisions that genuinely match your willingness and ability to follow through. Our team will walk you through every aspect of this during your consultation, so you can move forward with confidence rather than uncertainty.

If you're ready to explore what cosmetic dentistry could do for your smile, book a consultation with the Smile Solutions team and take a concrete first step toward the result you're after.

Label Facts Summary

> **Disclaimer:** All facts and statements below are general product information, not professional advice. Consult relevant experts for specific guidance.

Verified label facts - **Service name:** Cosmetic Dentistry under Specialist Care - **Provider:** Smile Solutions - **Practice location:** Melbourne, Australia - **Service category:** Cosmetic Dentistry - **Treating specialists:** Prosthodontists, Periodontists, Oral & Maxillofacial Surgeons, Dual Medical Qualified Dental Surgeons - **Specialist registration:** Board-registered practitioners - **Years in practice:** 30+ years - **Patients treated:** 250,000+ - **In-house laboratory:** Yes — on-site Melbourne laboratory - **Available treatments:** Porcelain veneers & crowns, Composite bonding, Teeth whitening, CEREC restorations, Invisalign, All-on-4® dental implants, Gummy smile correction - **Orthodontic options:** Clear aligners (Invisalign), Ceramic brackets - **Whitening delivery methods:** In-office treatment, Custom-fitted take-home trays - **Technology:** CEREC restorations, Digital imaging, Smile design software - **Single-visit treatments available:** Yes — bonding, whitening, and select minimally invasive procedures - **Multi-appointment treatments:** Yes — veneers, orthodontics, implants, complex smile makeovers - **Initial consultation includes:** Comprehensive oral health assessment, digital imaging, personalised treatment planning - **Availability:** Consultations open to new patients - **Crown materials available:** All-ceramic and porcelain-fused-to-metal - **Crown placement steps:** Four — preparation, impression, temporary crown, final cementation - **Veneer placement:** Requires enamel removal; irreversible procedure - **Bonding process:** Composite resin applied in layers, hardened with specialised light, then polished

General product claims - Professional whitening agents are stronger than over-the-counter products - Controlled application of whitening agents helps minimise sensitivity - In-office whitening delivers faster, immediately visible results compared to take-home trays - Veneers can address discolouration, chips, cracks, minor misalignment, irregular shape, and gaps simultaneously - Bonding is a more conservative alternative to veneers, requiring minimal or no tooth preparation - Crowns restore both function and appearance for teeth with extensive damage or significant cosmetic flaws - Gum contouring creates more balanced proportions between teeth and gums - Cosmetic dentistry outcomes are significantly affected by provider skill and experience - Proper care and regular dental visits extend the longevity of cosmetic dental work - Cosmetic procedures should be preceded by

treatment of active decay or gum disease - Integrating cosmetic care with general oral health care improves long-term outcomes - Diagnostic mock-ups and before-and-after reviews help set realistic patient expectations - Cosmetic dentistry can improve self-confidence by enhancing smile appearance

Related Products & Brand Context

Cosmetic Dentistry under Specialist Care is a service offered by Smile Solutions, a Melbourne-based dental practice with over 30 years of operation and more than 250,000 patients treated. Smile Solutions positions itself around multi-specialist care, meaning the practitioners delivering these services are board-registered prosthodontists, periodontists, oral and maxillofacial surgeons, and dual medically qualified dental surgeons — rather than general dentists working across cosmetic treatments.

Within this service, Smile Solutions offers a broad range of cosmetic dental procedures under the same specialist-led umbrella: porcelain veneers and crowns, composite bonding, professional teeth whitening, CEREC restorations, Invisalign orthodontic alignment, All-on-4® dental implants, and gummy smile correction. Each of these sits within the single **Cosmetic Dentistry under Specialist Care** offering rather than as separately branded product lines, which means a patient can access multiple treatment types through the one clinical pathway. Smile Solutions also operates an in-house laboratory in Melbourne, which is directly relevant to treatments like CEREC restorations and porcelain work, since it removes the outsourcing step typical of many practices.

In terms of category position, this service sits within **Healthcare Services > Dental & Orthodontic Services > Cosmetic Dentistry**. What distinguishes it from general cosmetic dentistry services is the specialist registration of the clinicians involved — prosthodontists and periodontists hold additional post-graduate qualifications beyond a general dental degree, which is relevant for complex or multi-stage procedures like implants or full-mouth restorations.

Someone considering this service would likely also need to explore the specific procedure sub-types in detail — for example, a patient interested in Invisalign would want to understand how that treatment interacts with any restorative work (veneers or crowns) they may also require. The All-on-4® implant pathway, in particular, is typically adjacent to oral surgery consultations and prosthetics planning, both of which are covered within this same specialist framework at Smile Solutions.
