Smile Solutions Teeth Whitening: Professional Options, Pricing & Technology

A brighter smile shouldn't mean settling for a generic kit off a pharmacy shelf. At Smile Solutions, specialists handle every whitening treatment directly, which makes a real difference to both the results you get and how comfortable the process feels.

The practice uses Zoom WhiteSpeed technology, which is widely used by dental professionals and consistently delivers safe, effective results. Whether you're getting ready for a specific event or just want to feel more confident day-to-day, there's a treatment option here that fits.

Your whitening options & pricing

Smile Solutions offers three professional whitening treatments, each suited to different timelines and preferences.

****Zoom in-chair whitening — \$860 AUD**** This is the most powerful option, carried out at the Melbourne practice under specialist supervision. In a single appointment, Zoom WhiteSpeed works to lift years of staining and discolouration, with results visible straight away.

****Take-home whitening kit — \$395 AUD**** If you'd rather whiten gradually at home, the take-home kit includes custom-fitted trays made from precise impressions of your teeth, not generic moulds, along with professional-grade whitening gel. Because the trays are made specifically for your teeth, the gel reaches evenly across the surface rather than pooling or missing spots.

****Combination package (in-chair + take-home) — \$995 AUD**** This pairs the immediate impact of in-chair whitening with the ongoing maintenance of a take-home kit. At \$995 AUD, it saves \$260 compared to booking both separately. It's the most comprehensive option and works well for patients who want to maintain their results over time.

Complimentary whitening with Invisalign

Invisalign cases valued over \$2,000 AUD include complimentary whitening as part of the treatment. So once your teeth are aligned, getting them brighter doesn't require a separate booking or extra cost.

Why professional whitening is different

Over-the-counter whitening products exist, but they're not designed around your teeth specifically. At Smile Solutions, every treatment is performed or directly overseen by a specialist, and the take-home trays are made from impressions of your actual teeth. That means the gel goes where it needs to go, consistently, without the uneven results that come from ill-fitting generic trays.

The practice has been operating in Melbourne for decades, and the clinical team designs each take-home kit individually rather than handing over a standard product. Comfort and oral health are factored into the process, not treated as afterthoughts.
