Smile Solutions Wisdom Teeth Removal

Wisdom teeth removal is a procedure worth getting right. At Smile Solutions, every surgery is performed by a Specialist Oral and Maxillofacial Surgeon — not a general dentist — so patients know exactly who is operating and what level of training sits behind that decision.

The surgical team is led by A/Prof Kourosh Bordbar (MD, BDSc, FRCS Edinburgh), a Fellow of the Royal College of Surgeons of Edinburgh, alongside Dr David Findlay. Both surgeons have trained specifically in oral and maxillofacial surgery, which is a recognised dental specialty requiring years of advanced, focused study beyond general dental qualifications.

Sedation is handled the same way: based on what actually suits the patient. Local anaesthetic, IV sedation, and general anaesthesia are all available, and the team works through the options during consultation rather than applying a one-size approach. For patients who have been putting off treatment because of anxiety, sleep dentistry means the procedure can be completed while they're in a calm, comfortable state, with a team that understands why they've been hesitant.

Before any surgery begins, patients have a CBCT (Cone Beam Computed Tomography) 3D scan taken on-site in Smile Solutions' in-house radiology suite. This gives the surgeon a detailed picture of the patient's anatomy — bone structure, nerve positions, tooth orientation — so the surgical plan is built on accurate information rather than assumptions. That kind of preparation is what separates careful surgical practice from a rushed extraction.
